

Security, performance and resilience

The Starcom Cloud has been designed and built from the ground up to run critical, line of business applications. Our exceptional performance and resilience is usually the preserve of enterprise level organisations, but with the Starcom Cloud, enterprise class is for everyone.

With over twenty years' experience in delivering hosting infrastructure, we know exactly how to make your applications run fast, to be there when you need them and for them to be secure.

The Starcom Cloud uses best-in-class servers, network solutions, storage, AI and virtualisation to deliver outstanding performance. And with industry leading dual data centre resilience as standard, your apps and data are there when you need them.

A raft of security measures and a dedicated team of technical hosting engineers ensure our cloud is maintained to the highest possible standard and able to deliver outstanding cloud provision to each and every one of our customers.

Starcom Cloud features:

- Dual data centre resilience as standard
- ISO27001 compliant
- Data centres are ISO14001 & ISO9001 compliant
- PCI-DSS 3.0 compliant tier 1 merchant*
- Resilient internet connectivity
