# HEALTH CHECK

Getting a cybersecurity health check is the essential first step to achieving cyber resilience. It gives you visibility of the blind spots and weaknesses that are making you vulnerable through comprehensively analysing and reporting on your entire IT estate. With new-found awareness of your short and long term risks– you can act to make impactful changes.

The Cybersecurity Health Check from Starcom delves under the hood of your business' cybersecurity, examining everything from policies to perimeter software and disaster recovery.

## ANALYSE

### 1 Policies

We check that all the rules and regulations designed as a first line of defence against cyberattacks are in place. This includes email, internet use, mobile, privacy and data policy.

### 2 Accounts and Passwords

Using admin logins unnecessarily? We look at your accounts and logins, password reset cycles and password strengths. If they don't meet standards, we recommend changes to make immediately.

### 3 Perimeter Software

We inspect any perimeter tech you have in place - firewalls, anti-virus, anti-spyware and scanning and monitoring solutions. We analyse its effectiveness and identify any open doors.

### 4 Data and Databases

Together with IT, data fuels your business. But if it's lost, corrupted or non-compliant you will be left in a significant state of vulnerability. We audit your data protection capability and evaluate the strength of the databases running your business-critical apps.

### 5 Back-up

Nobody likes to think about it, but without back-up, losses incurred by a cyberattack or breach will be permanent. We check what software is in place, that it backs-up regularly, and that data is encrypted.

### 6 Disaster Recovery

We ask how long you could live without IT. We advise how long it would take for your to be fully operational following a successful cyberattack, and to what digital point in time you return to.
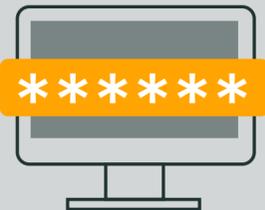

## RISK SCORE

### 7

We compile our findings and undertake a comprehensive review. From this, we issue a risk score and highlight the exact areas where improvements can be made, and in which order of priority.

## REPORT

### 8

For your reference and ours, we lay our findings bare in a clear, detailed report using straightforward language. This forms the blueprint for the advice we provide, and serves as a comparative point for your next health check.

## RECOMMEND

### 9

We advise remedial action and make helpful recommendations for increasing your cybersecurity resilience, explaining how to combat the risks and weaknesses identified in our report. Then, we can work with you to get your cybersecurity to full health.

**If you need expert help protecting yourself against the growing threats of cybercrime, contact the Starcom team on 0844 579 0800 to book a Cybersecurity Health Check.**
